DETAILED ACTION

This application has been examined. The claims 1-20 are allowed.

Reasons For Allowance

1. The following is an examiner's statement of reasons for allowance: The present invention is directed to a method or an electronic device for determining which key value in a set of key values is to be assigned as a current key value as a result an object intersecting a region where a virtual interface for enabling selection of individual key values in the set of key values is provided, the method comprising determining a position of where the object intersects the region using, at least in part, a depth sensor that determines a depth of the position in relation to a position of the depth sensor. The combination of the closest prior art of Rafii et al. (US 6,614,422), Lieberman et al. (US 7,084,857) and Arnon (US 6,650,318) showed a similar invention. However, they fail to teach identifying a set of one or more historical key values that are pertinent to the current key value; determining at least one of (i) a displacement characteristic of the object or (ii) a shape characteristic of object; and indicating a probability that current key value is a particular one or more of the key values in the set of key values based on the position, the set of one or more historical key values, and the at least one of the displacement characteristic or shape characteristic as claims 1, 12; or identifying a set of one or more possible input selections corresponding to the contact based at least in part on the position, including at least a first input selection in the set that is identified as corresponding to the contact between the object and the surface; determining a probability indication for at lest the first input selection; generating a first sound to indicate that the probability indication indicating that the identification of at least the first input selection is ambiguous as claim 16.
